NEW

AquaClave M900 Series

YOUR PRACTICE NEEDS

Engineered for thermal washers

AND

Steam Sterilisation equipment

The NEW AquaClave Mark 3 900 Series

remains the proven 5 stage Aqualife RO system but with an enhanced production capacity. Sufficient water to feed thermal washer disinfection and steam sterilisation equipment.

The **M900** includes a larger capacity membrane, double ended high flow pump, a 40 litre storage tank or with 80 litre tank option plus all the enhanced features of the standard AquaClave system.

Check your practice equipment needs with your authorised and approved Aqualife agent.

Reverse Osmosis -

The AquaClave M900 series model has a *high capacity* membrane with excellent abrasive resistance. The membrane will remove approximately 95% of all dissolved minerals and salts.

The two stage polishing system feeding the AutoClave will remove remaining organic and non-organic residues thereby finishing the water quality to meet all autoclave operating standards. The water for the thermal washes by-passes this final treatment and is supplied direct from the membrane.

Commercial Advantages -

The availability of this volume of water enhances the economics of your investment and makes your choice of an AquaClave M900 series an intelligent decision.

Dimensions:

(System) 46cm W x 54cm H x 20cm D
(40L Tank) Ø40cm x 63cm H

Please note that this system is only suitable for use on disinfected potable water supplies from your local water authority. For areas where tank or other water is required please consult Aqualife. To achieve the water quality indicated above the system must be operated in accordance with the operating and maintenance instructions. On site verification of the water quality is required for non-municipal water supplies.
